VENKAYYA SWAMY CHAMANTHI

venkyswamy437@gmail.com | +91-6309736330 | Hyderabad | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Java Full Stack Developer and 2026 Computer Science graduate with 6 months of internship experience building secure backend applications, REST APIs, and microservices using Java, Spring Boot, and MySQL at VS IT Solutions. Hands-on experience designing production-style systems covering JWT security, service discovery, event-driven messaging with Kafka, and AI-powered document intelligence. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, and layered architecture. Seeking a Java Backend Developer / Software Engineer role to contribute to scalable, production-ready systems.

TECHNICAL SKILLS

Languages: Java (Core Java, Java 8, 17, 21), SQL
Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, Servlets, JDBC
Security: Spring Security, JWT (JSON Web Tokens), Role-Based Access Control (RBAC)
Cloud & Microservices: Spring Cloud (Eureka Service Discovery, Spring Cloud Gateway), OpenFeign
Messaging & Distributed Systems: Apache Kafka (Basics), Event-Driven Architecture
AI Integration: Spring AI, Google Gemini API, Vector Embeddings, pgvector, Retrieval-Augmented Generation (RAG)
Databases: MySQL, PostgreSQL (pgvector), Relational Schema Design
Web Technologies: HTML5, CSS3, React.js (Basics), Axios
IDEs & Tools: IntelliJ IDEA, VS Code, Eclipse, Postman, Swagger/OpenAPI, MySQL Workbench, Git, GitHub, Maven
Core CS: Data Structures & Algorithms, OOPs, Layered Architecture, Design Patterns
AI Tools: ChatGPT, Gemini, Claude, GitHub Copilot, Antigravity
Soft Skills: Problem Solving, Team Collaboration, Adaptability, Clear Communication

INTERNSHIP EXPERIENCE

Backend Java Developer Intern | VS IT Solutions 6 Months | May 2026 – October 2026

Enterprise Student Portal & Learning Management System

- Designed and developed Spring Boot REST APIs for student onboarding, batch management, attendance, assignments, assessments, and project-progress tracking, enabling role-based dashboards for students and administrators.
- Contributed to a modular microservices backend by separating student, attendance, assessment, and reporting workflows into independently maintainable services; applied circuit breaker and fallback mechanisms to prevent cascading failures and provide graceful degradation.
- Designed normalised JPA/SQL data models with optimised entity relationships and pagination, reducing redundant data and improving performance for large student and dashboard datasets.
- Strengthened backend quality by implementing DTO-based API contracts, request validation, centralised exception handling, role-based access control, logging, and unit/API testing, ensuring secure, maintainable, and reliable services.

PROJECT EXPERIENCE

SmartPrep AI – AI-Powered Document Intelligence Assistant GitHub

Java Full Stack | Java 21, Spring Boot, Spring AI, Google Gemini API, PostgreSQL (pgvector), Apache PDFBox, JWT

- Architected an AI-powered document intelligence assistant that enables users to upload enterprise PDF files (technical manuals, business reports, study materials) and query them via natural language.
- Engineered a full Retrieval-Augmented Generation (RAG) pipeline: extracted raw document text via Apache PDFBox, implemented intelligent token chunking, and generated vector embeddings using Spring AI.
- Integrated PostgreSQL with the pgvector extension to perform cosine similarity vector searches, retrieving the most relevant document chunks based on semantic context.
- Connected Google Gemini LLM using Spring AI to synthesize retrieved document context and produce accurate, grounded, and context-aware responses with minimal hallucinations.
- Implemented stateless authentication using Spring Security and JWT with user-specific document isolation, ensuring secure and private data retrieval for authenticated accounts.

PG Finder – Microservices-Based Hostel Booking Platform GitHub

Java Full Stack | Java, Spring Boot, Spring Cloud (Eureka, API Gateway), Apache Kafka, OpenFeign, JWT, MySQL, React.js

- Designed and built a microservices-based hostel booking system with independent User, Hostel, and Booking services, each backed by its own MySQL database for strict data isolation and service autonomy.
- Configured Spring Cloud API Gateway as the single entry point for client requests and Eureka for dynamic service registry and discovery, enabling synchronous inter-service communication via OpenFeign.
- Implemented stateless JWT authentication with Role-Based Access Control (RBAC) to secure sensitive endpoints and enforce tiered permissions across Admin and Guest user roles.
- Engineered critical booking validation rules for bed availability, check-in/check-out date ranges, and overlapping reservation checks to eliminate double-booking errors.
- Introduced Apache Kafka to handle event-driven messaging for asynchronous booking-confirmation notifications, reducing service latency, and documented all endpoints with Swagger/OpenAPI.

FoodFlow – Restaurant & Order Management Microservices Java Backend

Java, Spring Boot, Microservices, Spring Data JPA, REST APIs, MySQL

- Developed an independent microservices architecture separating restaurant catalog management and customer ordering workflows into separately deployable, loosely coupled services.
- Designed clean REST APIs with request validation, structured DTO contracts, and global exception handling, ensuring independent database schemas for each service.
- Verified complete endpoint reliability, status codes, and error scenarios using Postman test collections and managed repository code on GitHub.

MediCore – Hospital Management REST API Java Backend

Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, Postman

- Built a comprehensive hospital management REST API supporting patient admissions, doctor allocations, and treatment appointment scheduling based on a Controller–Service–Repository layered design.
- Implemented full CRUD operations with DTO mapping, input validation using Hibernate Validator, and centralized exception handling for uniform JSON error responses.
- Leveraged Spring Data JPA and Hibernate for relational mapping and database transactions, validating all endpoints with automated Postman test scripts.

ATM Banking Web Application Academic Project

Java, Servlets, JSP, JDBC, MySQL, MVC Architecture

- Developed a web-based banking application supporting customer authentication, balance inquiries, fund deposits, and withdrawal transactions following MVC architecture.
- Implemented secure database connectivity using JDBC to execute transactional queries and update user account records reliably in MySQL.

TECHNICAL PROFILES

GitHub: github.com/venky4378 — 5+ personal and academic repositories including microservices, REST APIs, RAG AI systems, and full-stack projects.

LinkedIn: linkedin.com/in/swamy-ch — Professional network, project updates, and continuous learning in modern Java technologies.

EDUCATION

Aditya College of Engineering and Technology, Surampalem 2023 – 2026

B.Tech – Computer Science & Engineering | CGPA: 7.55

Aditya Engineering College, Surampalem 2020 – 2023

Diploma – Mechanical Engineering | CGPA: 8.30

CERTIFICATIONS

- Java Full Stack Development — VS IT Solutions
- Java (4-Star Rating) — HackerRank
- SQL (Basic) — HackerRank

ACHIEVEMENTS

- Secured **2nd place** in the college technical quiz competition at *Veda Fest 2024*.
- Solved **50+ coding challenges** on HackerRank, strengthening core algorithmic thinking and data structure implementations.
- Designed and built **5+ independent full-stack & microservice projects** covering Spring Boot, Spring Cloud, Kafka, JWT security, and Spring AI.
