PROFESSIONAL SUMMARY

Java Backend Developer and 2026 Computer Science graduate with 6 months of internship experience in Java Full Stack development. Hands-on experience developing RESTful APIs, microservices, and database-driven applications using Java, Spring Boot, MySQL, and PostgreSQL. Familiar with JWT authentication, inter-service communication, and AI-powered document retrieval using Spring AI. Seeking an entry-level Java Backend Developer role to build reliable and maintainable software solutions.

TECHNICAL SKILLS

Languages: Java (Core Java, Java 8,17), SQL
Backend : Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Servlets, JDBC
Architecture & Messaging: Microservices, REST APIs, OpenFeign, Apache Kafka, Event-Driven Design, DTOs
Database: MySQL
Frontend : HTML5, CSS3
Version Control & DevOps: Git, GitHub, Maven
Tools & IDEs: Eclipse, IntelliJ IDEA, VS Code, Postman, Swagger, MySQL Workbench, Maven
Core CS: Data Structures & Algorithms, OOPs, Design Patterns
AI Tools: ChatGPT, Gemini, Claude, Antigravity (used for learning, debugging, and documentation).
Soft Skills: Problem Solving, Team Collaboration, Communication

INTERNSHIP EXPERIENCE

Backend Java Developer Intern | V S IT Solutions 6 Months |March 2026 – August 2026
Enterprise Student Portal & Learning Management System

- Designed and developed **Spring Boot REST APIs** for student onboarding, batch management, attendance, assignments, assessments, and project-progress tracking, enabling role-based dashboards for students and administrators.
- Contributed to a **modular microservices backend** by separating student, attendance, assessment, and reporting workflows into independently maintainable services; applied circuit breaker and fallback mechanisms to prevent cascading failures and provide graceful degradation.
- Designed normalised JPA/SQL data models with optimised entity relationships and pagination, reducing redundant data and improving performance for large student and dashboard datasets.
- Strengthened backend quality by implementing DTO-based API contracts, request validation, centralised exception handling, role-based access control, logging, and unit/API testing, ensuring secure, maintainable, and reliable services.

TECHNICAL PROJECTS

PG Finder – Microservices-Based Hostel Booking System https://github.com/venky4378/pg-finder-microservices
Tech Stack: Java, Spring Boot, Spring Cloud (Eureka, Gateway), Apache Kafka, OpenFeign, JWT, MySQL, React.js

- Engineered **a microservices-based accommodation platform** supporting hostel discovery, bed availability management, and reservation workflows for residents and property owners.
- Developed independent **User, Hostel, Booking,** and **Notification** services using Spring Boot, with dedicated MySQL schemas for service-level data management.

- Integrated **Spring Cloud Gateway**, **Eureka Server**, and **OpenFeign** for centralized request routing, service discovery, and synchronous inter-service communication.
- Implemented **JWT authentication, role-based access control (RBAC),** and **Apache Kafka** for secure API access and asynchronous processing of booking-related notifications.

CognifyAI — AI-Powered Document Intelligence Platform

https://github.com/venky4378/cognifyai-document-intelligence

Tech Stack: Java, Spring Boot, Spring AI, Spring Security, JWT, PostgreSQL, PGVector, Apache PDFBox, Google Gemini Embeddings, Groq API, Maven, REST APIs

- Developed an AI-powered document intelligence platform enabling users to upload **PDF documents** and **retrieve context-aware answers** through natural-language queries.
- Implemented document ingestion and text extraction using Apache PDFBox, followed by semantic chunking and **embedding generation** to prepare documents for retrieval.
- Integrated Google Gemini embedding models with PostgreSQL and PGVector to perform **vector similarity searches** and retrieve relevant document passages.
- Leveraged Spring AI and Groq-hosted language models to generate **context-grounded responses**, incorporating Spring Security and JWT authentication to enforce document access controls.

Medicore — Full-Stack Hospital Management System https://github.com/venky4378/Medicore

Tech Stack: Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, React.js, REST APIs

- Developed a full-stack hospital management application to manage patient records and streamline hospital-related operations through a React-based user interface and Spring Boot backend.
- Designed RESTful APIs using Spring Boot, Spring Data JPA, and Hibernate to handle patient data management and database interactions.
- Implemented **centralized exception handling** and Aspect-Oriented Programming (AOP) for consistent error responses and application-level logging.
- Integrated the React frontend with backend REST APIs using Axios and configured cross-origin resource sharing (CORS) for frontend-backend communication.

EDUCATION

Aditya College of Engineering and Technology **2023-2026**
B.Tech in Computer Science & Engineering(Data Science) | CGPA:7.55

Aditya Engineering College **2023-2026**
Diploma in Mechanical Engineering | CGPA : 8.31

Zilla Parishath HighSchool ,Thetagunta **2019-2020**
SSC 10th - CGPA : 9.8

CERTIFICATIONS & ACHIEVEMENTS

- **Certifications**: Java Full Stack Development (V.S. IT Solutions) , HackerRank Java (4-Star) , HackerRank SQL (Basic).
- Key Achievements: Solved 100+ coding challenges on HackerRank, Secured 2nd Place in College Technical Quiz (Veda Fest 2024).
- Gained hands-on development experience by building real-world applications using Java, Spring Boot, REST APIs, and microservices.
- Led a team for the college major project, coordinating task allocation, implementation, and project delivery.
